CEE 370 Environmental Engineering Principles

Lecture #3 Environmental Chemistry I: Units of Concentration

[Reading: M&Z, Chapt 2](#)

David Reckhow CEE 370 L#3 1

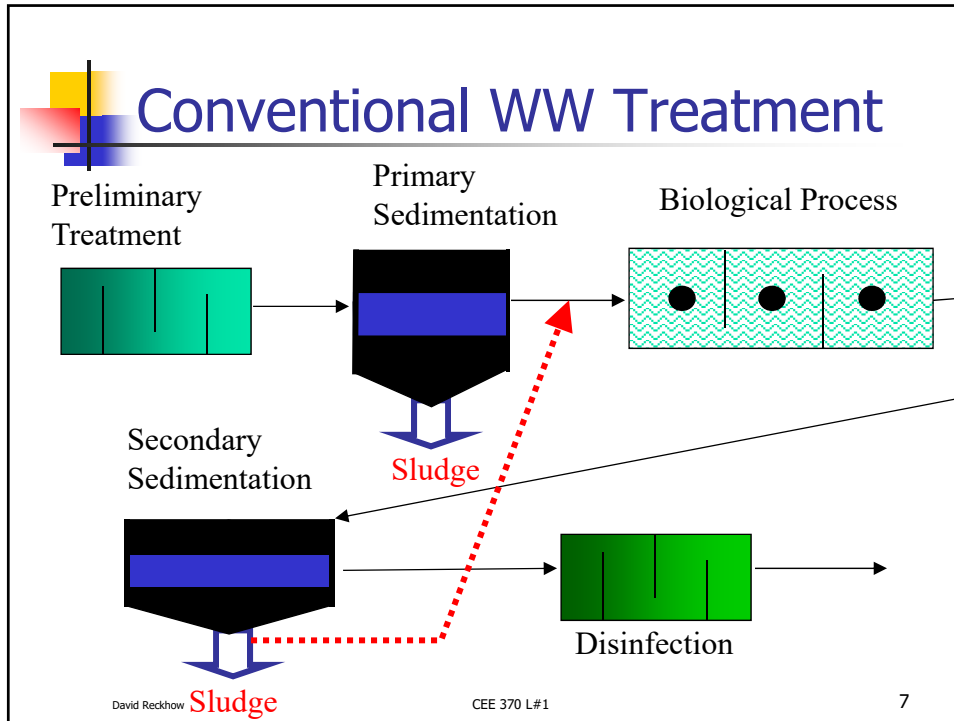

- ## What Environmental Engineers Do
- Three examples
 - Water: Wastewater treatment
 - Air: Acid Rain
 - Solids: VOCs in Soils
- David Reckhow CEE 370 L#1 4

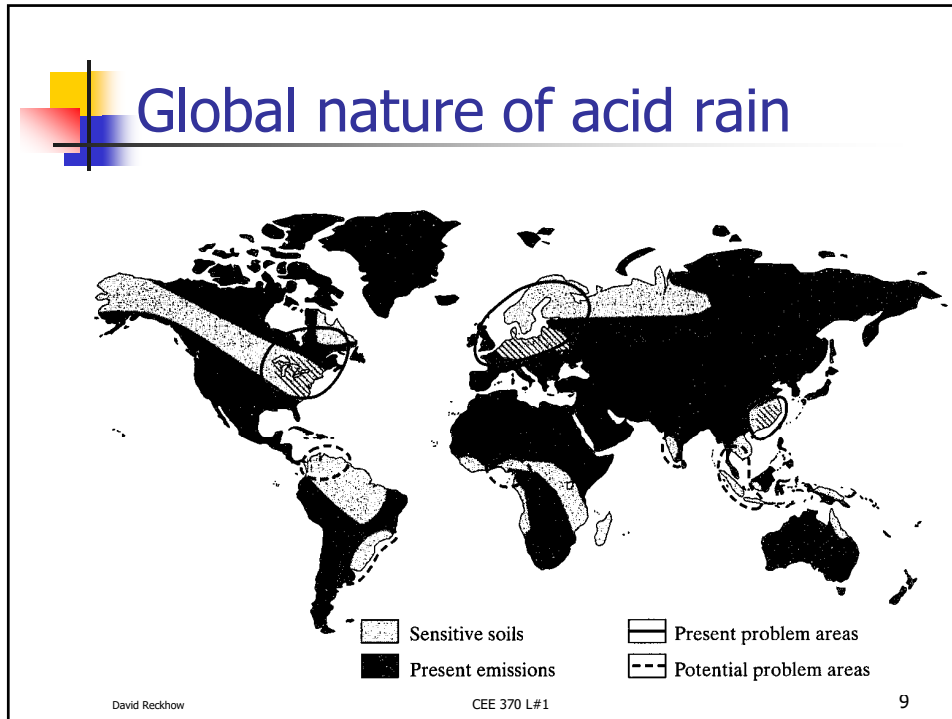

Situation #1: Municipal WWT

- Problem: you need to treat wastewater from a new suburban housing development
 - How do you design the plant?
 - Process types, tank sizes, N or P removal,
 - How do you operate the plant?
 - Treatment objectives, anaerobic or aerobic, seasonal variations, allow industrial users

David Reckhow CEE 370 L#1 6

Air pollution issues

- How to remove sulfur and nitrogen oxides from stack gases
- What to do with the wastewater produced
- What happens with these gases get into the atmosphere
- How are the air pollution problems transported & who is affected
- What impact do these emissions have on natural water and aquatic life
- Regional solutions

David Reckhow CEE 370 L#1 10

Situation 3: VOCs in Soil

- Design & operation of treatment system
 - For soil, sediment, groundwater, leachate
- What type of system
 - Chemical, biological, physical
- What is the fate of the VOCs
- How quickly will they spread
- Will they form more toxic byproducts
 - Trichloroethene to vinyl chloride

David Reckhow CEE 370 L#1 11

Rank	Chemical	Use	Chemical Formula
1	Dichloromethane	Paint stripping, solvent degreaser, blowing agent in foams	CH_2Cl_2
2	Trichloroethene	Dry cleaning agent, metal degreaser solvent	$\text{C}_2\text{Cl}_3\text{H}$
3	Tetrachloroethene	Dry cleaning, metal degreaser, solvent, paint remover	C_2Cl_4
4	<i>trans</i> 1,2-Dichloroethene	Solvent, additive to lacquer, low-temperature solvent for caffeine	$\text{C}_2\text{H}_2\text{Cl}_2$
5	Chloroform	Solvent, electronic circuit manufacturing	CHCl_3
6	1,1-Dichloroethane	Paint and varnish remover, metal degreaser, ore flotation	$\text{C}_2\text{Cl}_2\text{H}_4$
7	1,1-Dichloroethene	Paint and varnish remover, metal degreaser	$\text{C}_2\text{Cl}_2\text{H}_2$
8	1,1,1-Trichloroethane	Solvent	$\text{C}_2\text{Cl}_3\text{H}_3$
9	Toluene	Gasoline component, solvent thinner, adhesive solvent	C_7H_8
10	1,2-Dichloroethane	Paint and varnish remover, metal degreaser, fumigant	$\text{C}_2\text{Cl}_2\text{H}_4$

David Reckhow CEE 370 L#1 12

Rank	Chemical	Use	Chemical Formula
11	Benzene	Component of gasoline, used in chemical synthesis	C ₆ H ₆
12	Ethylbenzene	Used in styrene manufacturing, solvent, asphalt construction	C ₈ H ₁₀
13	Phenol	Disinfectant, pharmaceutical aid	C ₆ H ₅ OH
14	Chlorobenzene	Used in chemical synthesis	C ₆ H ₅ Cl
15	Vinyl chloride	Refrigerant, used in plastics industry	C ₂ ClH ₃
16	Carbon tetrachloride	Dry cleaning, metal degreasing, veterinary medicine	CCl ₄
17	Bis(2-ethylhexyl)phthalate	Used in vacuum pumps	C ₂₄ H ₃₈ O ₄
18	Naphthalene	Used in manufacturing mothballs and motor fuel, component of coal tar	C ₁₀ H ₈
19	1,1,2-Trichloroethane	Solvent	C ₂ Cl ₃ H ₃
20	Chloroethane	Refrigerant, solvent, used to produce tetraethyl lead	C ₂ ClH ₅

David Reckhow CEE 370 L#1 13

■ How can we use our knowledge of physical & chemical properties?

Table 1-2. Properties of Selected Chlorinated Aliphatic Hydrocarbons*

Chemical	Vapor Pressure (mmHg)	Henry's Constant (atm·m ³ /mole)	Water Solubility (mg/L)	Chemical Half-life (Years)
Carbon tetrachloride	90	0.0294	785	16–41
Chloroform	160	0.0040	8,200	742–3,000
Tetrachloroethene	14	0.0268	150	3.8 × 10 ⁸ –9.9 × 10 ⁸
Trichloroethene	60	0.0117	1,100	4.9 × 10 ⁵ –1.3 × 10 ⁶
Vinyl chloride	2,660	0.0224	2,700	>10

From Barbee, 1994.
*In later chapters, readers will learn about how these properties are used in evaluating and solving environmental problems.

From: Mihelcic, 1999

1972: Federal Water Pollution Control Act

An "act" of Congress = a law

- PL 92-500 subsequently amended and now called the Clean Water Act
 - established water quality goals "fishable & swimmable" and timetable
 - established National Pollution Discharge Elimination System (NPDES)
 - construction grants for WW treatment
- Eventually required secondary treatment (30/30)
 - 30 mg/L BOD₅
 - 30 mg/L TSS

■ Created by Nixon Adm

Legislative History

- 1970: USEPA formed
- 1972: Federal Water Pollution Control Act
 - PL 92-500 subsequently amended and now called the Clean Water Act
 - established water quality goals “fishable & swimmable” and timetable
 - established National Pollution Discharge Elimination System (NPDES)
 - construction grants for WW treatment
 - Required industry-specific WW treatment technology
 - BPT: best practicable technology by 1977
 - BAT: best available technology by 1983

David Reckhow CEE 370 L#2 25

Legislative History (cont.)

- 1970: Clean Air Act
 - national air quality standards
 - amended several times since ('77 '90)
- 1974: Safe Drinking Water Act
 - set national drinking water standards
 - amended many times since
- 1976: Toxic Substances Control Act (TSCA)
 - regulate new hazardous chemicals (e.g. PCBs)

David Reckhow CEE 370 L#2 26

Legislative History (cont.)

- 1976: Resource Conservation and Recovery Act (RCRA)
 - protect air, water and land from solid and hazardous wastes
 - defines hazardous wastes
- 1977: Clean Water Act Amendments
 - Best conventional pollutant technology (BCT)
 - Secondary treatment: 30 mg/L BOD₅ 30 mg/L TSS
 - Priority Pollutants (127 toxic compounds)
- 1980: Comprehensive Environmental Response, Compensation and Liabilities Act (CERCLA or Superfund)
 - established fund and mechanisms for cleaning existing hazardous waste sites

David Reckhow CEE 370 L#2 27

Regulatory Methods

- Environmental Quality-Based Standards
 - cannot degrade environment beyond a certain level
 - dependent on immediate environment
 - more flexible
- Effluent-Based Standards
 - cannot discharge above a certain level of pollutant
 - independent of immediate environment
 - easier to establish and monitor

David Reckhow CEE 370 L#2 28

"Controlled Trading"

Bubble Policy

"Environmental rules now regulate each of the different processes in a plant. With this new policy we will draw an **imaginary bubble** around the whole plant and tell the company that it can find the most efficient way of controlling the plant's emissions as a whole. If it costs a dollar to control a pound of particulate pollution from one machine and fifty cents from another, the plant manager will quite reasonably choose to control fewer \$1 pounds and more 50 cent pounds. If the plant engineer can find a new way of reducing particulate emissions from a third machine for 30 cents a pound, he will remove as many of these pounds as he can in preference to either the 50 cent or one dollar pounds. As long as no more particulates escape from the overall bubble than before, the company's engineers can continue to innovate."

Douglas Costle, EPA Administrator, 1979

Without Bubble

Total allowed emissions = 200 Mg · day⁻¹
Control cost = \$20 million

100 Mg · day⁻¹ 100 Mg · day⁻¹

With Bubble

Total allowed emissions = 200 Mg · day⁻¹
Control cost = \$15 million

150 Mg · day⁻¹ 50 Mg · day⁻¹

The Imaginary Bubble

From: Davis & Masten, 2004

Controlling Air Pollution in Cities

Source	Pollutants	Methods of Control
Industries	Volatile organics	Require reduced emissions
	Volatile chlorofluorocarbons	Require reduced emissions
	Particulate inorganics	Require reduced emissions
Automobiles	Hydrocarbons	Improved discharge nozzles at filling stations, improved ventilation within the gasoline tank
	Products of incomplete combustion	Improved combustion by requiring improved combustion efficiency (auto manufacturer), regular engine maintenance by requiring vehicle emission testing, requiring gasoline stations to provide only oxygenated fuels.
	Chlorofluorocarbons from air conditioners	Require the redesign of the air conditioner so that future automobiles can use other refrigerants.

30

Basis for Setting Standards

- Experimentation
 - animal testing, human exposure
- Attainability
 - economic & technical feasibility
- Established practice
- Risk Assessment

David Reckhow CEE 370 L#2 31

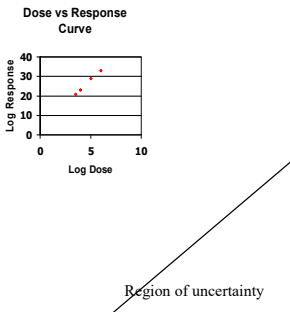

Definitions

- **Risk**: the probability of occurrence of adverse health effects in humans
- **Risk Assessment**: the process of characterizing the nature and probability of adverse health effects of human exposure to environmental hazards
- **Risk Management**: the process of evaluating and selecting among alternative regulatory actions

David Reckhow CEE 370 L#2 32

Four steps in a Risk Assessment

- Hazard Identification
 - what is it?
- Dose Response
 - see graph
- Human Exposure
 - actual doses and routes
- Risk Characterization

Dose vs Response Curve

Log Response

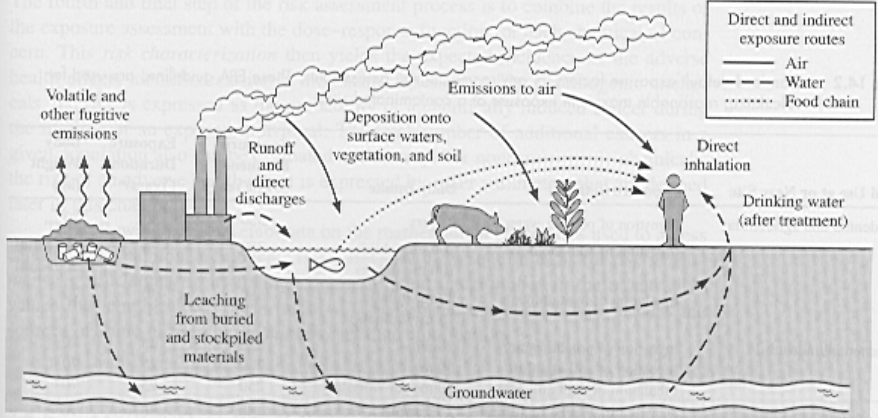

Log Dose

Region of uncertainty

David Reckhow
CEE 370 L#2
33

Routes of exposure

From: Rubin, 2001

Direct and indirect exposure routes

- Air
- - - Water
- Food chain

David Reckhow
CEE 370 L#2
34

Comparative Risks

All increase chance of death in any year by 0.000001

Smoking 1.4 cigarettes	Cancer, heart disease
Spending 1 hr. in a coal mine	Black lung disease
Living 2 days in NYC or Boston	Air pollution
Living 2 months in Denver	Cancer caused by cosmic radiation
One chest X-ray	Cancer caused by radiation
Eating 40 tbs. of peanut butter	Liver cancer caused by Aflatoxin B
Drinking 30 12-oz. cans of diet soda	Cancer caused by saccharin
Living 150 yrs. within 20 miles of a nuclear power plant	Cancer caused by radiation

David Reckhow
CEE 370 L#2
35

Bonds

electronegativity
low high

- Non-Polar Covalent bond
 - Electrons are perfectly shared between atoms
- Polar Covalent bond
 - Electrons shared but not equally
- Ionic bond
 - Electrons are entirely associated with one of the atoms
 - The more electronegative one

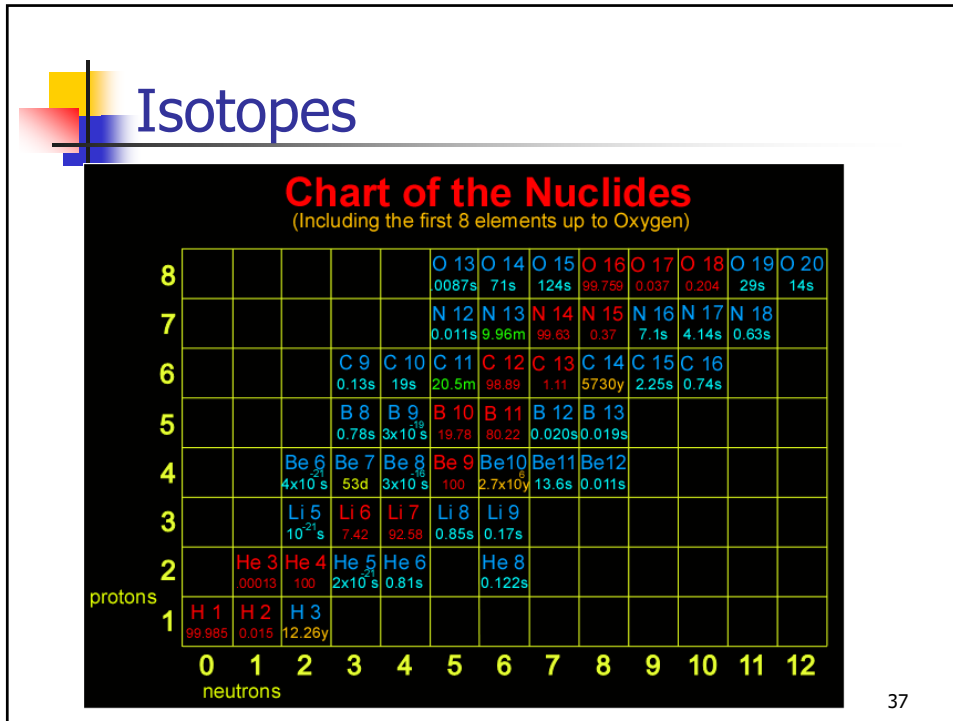

$\text{H}-\text{H}$

$\text{H}-\overset{\delta-}{\text{O}}-\overset{\delta+}{\text{H}}$

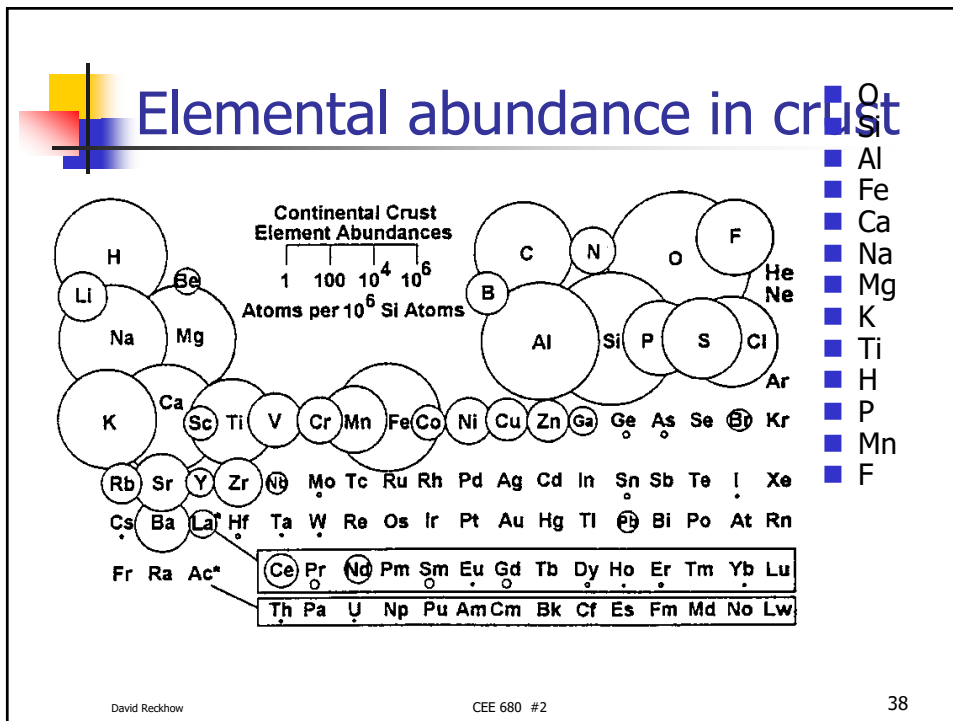

H^{\oplus}
Cation

Cl^{\ominus}
Anion
