Snap Out Of It Bracelet Talking Microchip!

The microchip needed would be housed in an SS or 14k circular charm that is attached to a flexible bracelet. The microchip would be activated to speak when the bracelet is pulled away from the wrist and "snapped." It is necessary that the chip can be turned off or on. The voice would consist of no more than 10 words. The voice would say "Snap Out Of It!" or a personal affirmation chosen by the customer, i.e. "I can do it."
