

*Public Launch and Demonstration of*

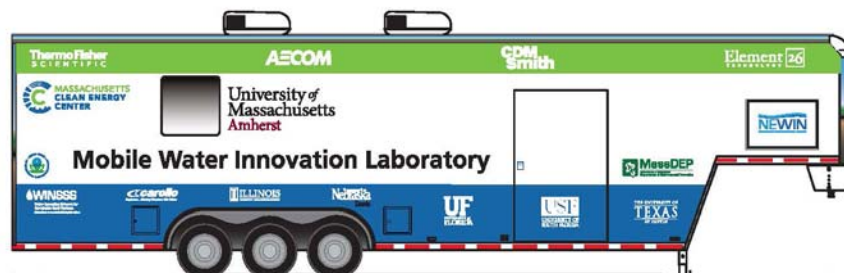

## The UMass-MassCEC- NEWIN Mobile Water Treatment Lab

May 17, 2018 - starting at noon

Room 222, Massachusetts State House; 24 Beacon Street, Boston, MA

Please join the Massachusetts Clean Energy Center (MassCEC) and the University of Massachusetts (UMass) Amherst for a ribbon cutting and demonstration of the UMass Mobile Water Innovation Laboratory. The event will take place at the State House and will include representatives from UMass Amherst, MassCEC, Northeast Water Innovation Network (NEWIN), Senator Gobi, Representative Pignatelli and other state officials. The event will consist of a speaking program, ribbon cutting and demonstration of the mobile water lab. The lab will be on site and available for viewing immediately after the speaking event.

**More on the mobile lab:** This 36 foot trailer was made possible through grants from the MassCEC, US EPA, MADEP and with the help of our corporate sponsors and the New England Water Innovation Network (NEWIN). The lab is equipped with state-of-the-art treatment and monitoring systems that will be deployed across Massachusetts to help improve the quality of the Commonwealth's public drinking water. Its primary mission is to accelerate the adoption of new technologies that produce higher quality drinking water at lower cost and using less energy. New England is at the hub of North America's water innovation ecosystem. The new Mobile Water Treatment Lab that we are launching on May 17<sup>th</sup> and 18<sup>th</sup> will help accelerate our home-grown technologies and at the same time improve public health.
