

Herb Chamber

SDP 21 Team 28

Simon, Nam, Duoc, Christian

Advisor: Prof. Siqueira

University of
Massachusetts
Amherst BE REVOLUTIONARY™

Problem Statement

Many people are thinking about becoming more self-sufficient and growing some of their own herbs at home but are stopped at the starting point due to many requirements they need to care for the plants. Even without a green thumb, the Herb Chamber can monitor every factor that is needed to grow a garden successfully and take care of it for you, such as soil moisture, air temperature, air humidity, lighting duration and more. Herb Chamber can send you a reminder when it is time to harvest and will allow you to see your home garden from anywhere in the world. This allows you to cross the threshold without needing to do much work yourself.

System Specifications

1. Compact indoor form that fits on most tables
 - a. 4 Soil containers
 - b. Compact tent enclosure 23" x 23" x 42"
2. Power supply
 - a. Low cost, low power system that delivers 50W
3. IP65 water and dust resistance rating
4. Water system
 - a. 1x 12V DC pump with ½ inch tubing
 - b. 4x 12V DC solenoid controlled watering channel with ½ inch tubing
5. Light System
 - a. Indoor grow light
6. Sensor System
 - a. humidity/temperature module
 - b. moisture sensor
7. Product app interface
 - a. Connected with a wifi module allowing remote access
 - b. Displays various measured parameters
 - c. Default plant directory for optimal growth

Duoc's FDR Deliverables

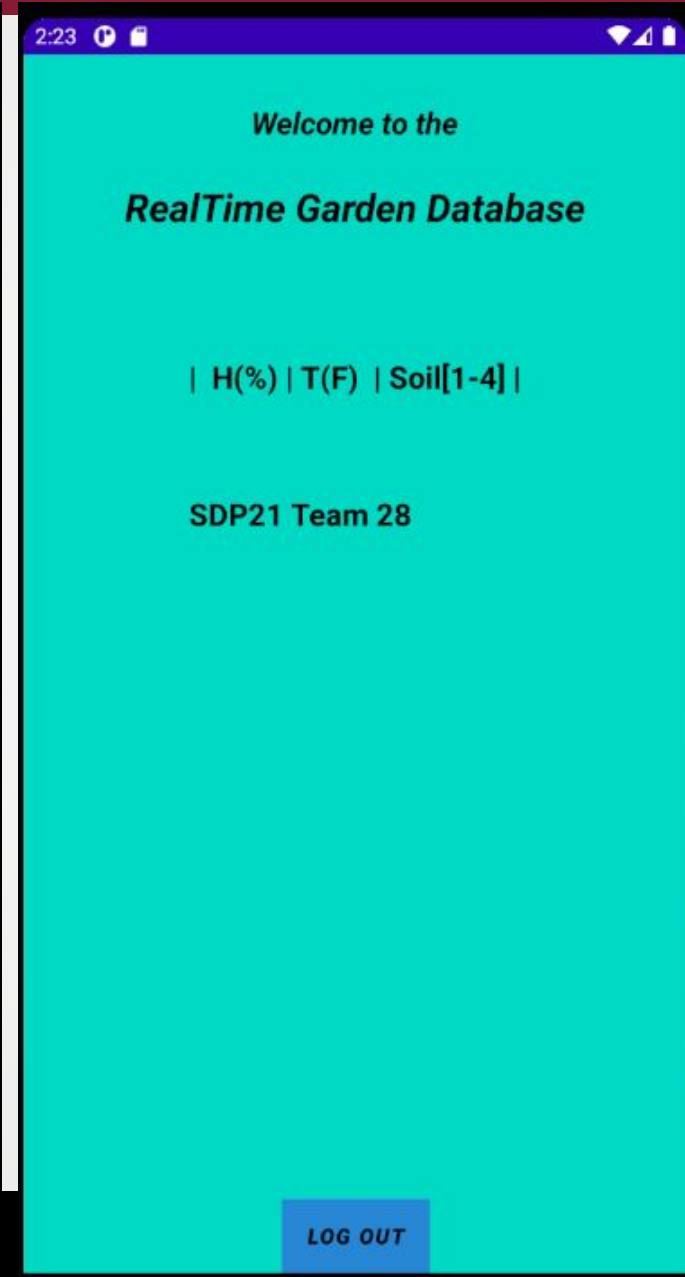

Worked with:

- DHT11 humidity and temperature Sensor
- Capacitive soil sensor
- ESP8266/WROOM-02

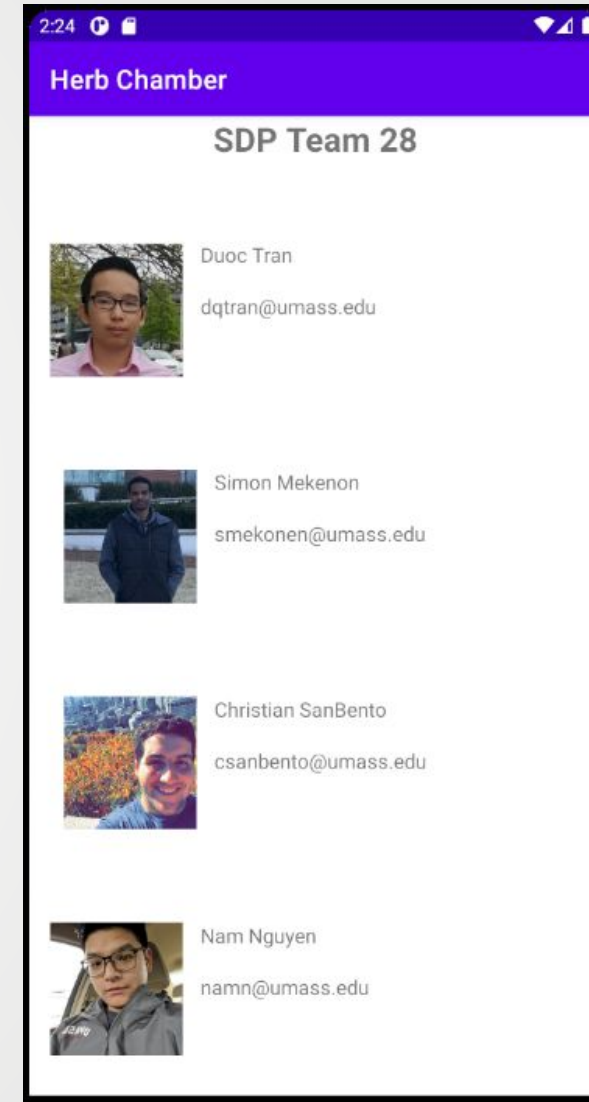

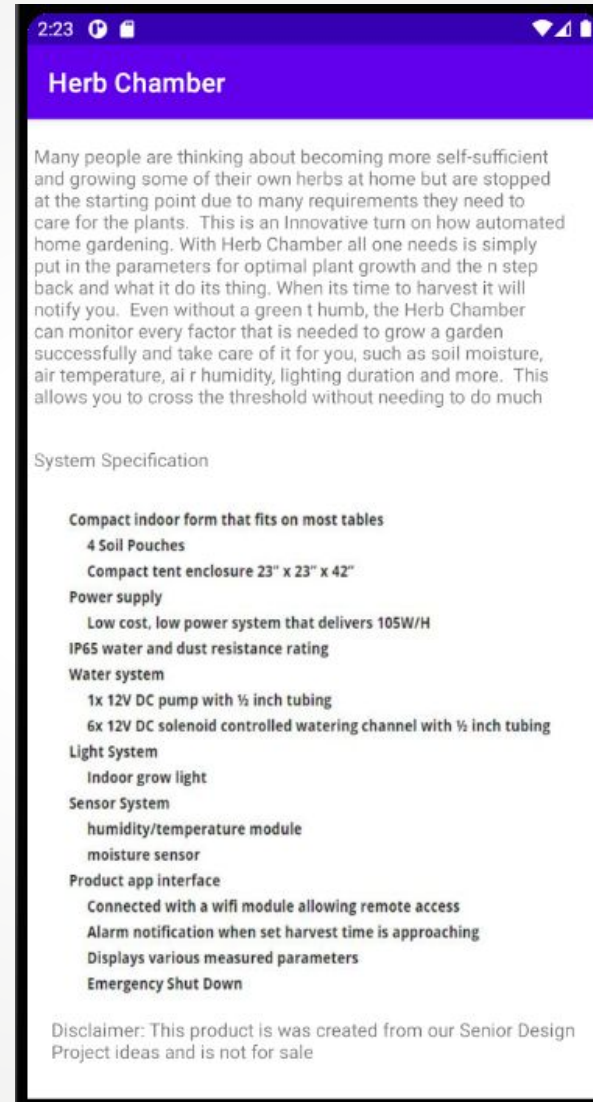

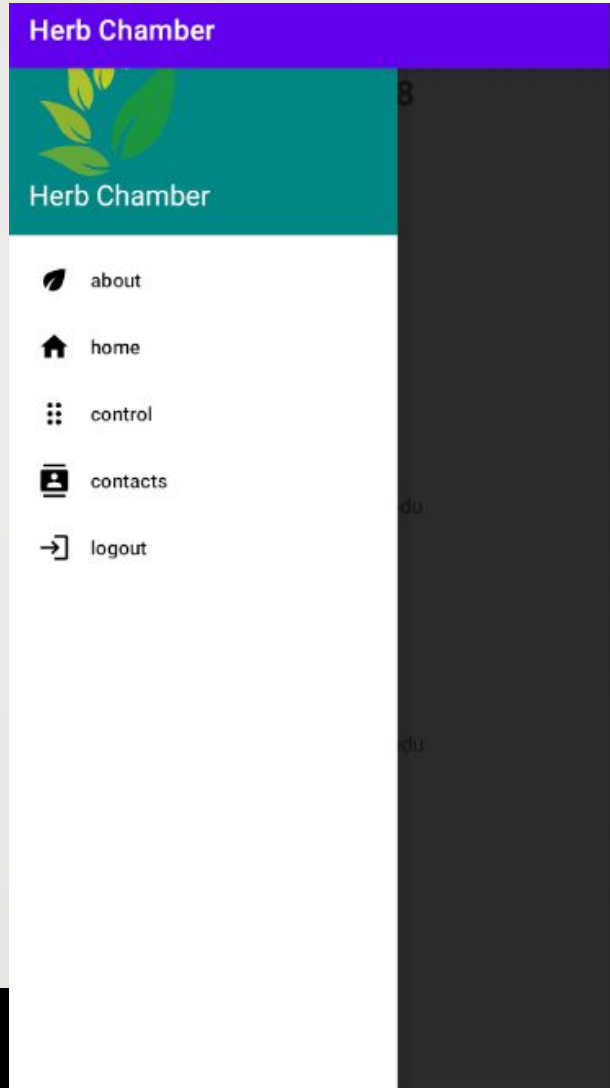

Using what I was working with for CDR, I created an app with similar uses to the one shown during the CDR demo.

Duoc's CDR Deliverables

Using Android Studio with Java to
create a standalone application for our
project: Herb Chamber

Duoc's FDR Deliverables

Simon's FPR Deliverables

- Convert Arduino code into C code to run on the ESP8266
- Adjust design to use ESP8266 as the main processor
 - Analog multiplexer for sensors
 - Removing serial connection

GPIO Implementation

7.1.1. PIN-Related Macros

The following macros are used to control the GPIO pins' status.

<code>PIN_PULLUP_DIS(PIN_NAME)</code>	Disable pin pull-up.	Example:
<code>PIN_PULLUP_EN(PIN_NAME)</code>	Enable pin pull up.	<code>// Use MTDI pin as GPIO12.</code>
<code>PIN_FUNC_SELECT(PIN_NAME, FUNC)</code>	Select pin function.	<code>PIN_FUNC_SELECT(PERIPHS_IO_MUX_MTDI_U, FUNC_GPIO12);</code>

7.1.2. gpio_output_set

Function	Set GPIO property.
Prototype	<pre>void gpio_output_set(uint32 set_mask, uint32 clear_mask, uint32 enable_mask, uint32 disable_mask)</pre>
Parameter	<p><code>uint32 set_mask</code>: set high output; 1: high output; 0: no status change;</p> <p><code>uint32 clear_mask</code>: set low output; 1: low output; 0: no status change;</p> <p><code>uint32 enable_mask</code>: enable output bit;</p> <p><code>uint32 disable_mask</code>: enable input bit.</p>
Return	none
Example	<p><code>gpio_output_set(BIT12, 0, BIT12, 0)</code>: Set GPIO12 as high-level output.</p> <p><code>gpio_output_set(0, BIT12, BIT12, 0)</code>: Set GPIO12 as low-level output.</p> <p><code>gpio_output_set(BIT12, BIT13, BIT12 BIT13, 0)</code>: Set GPIO12 as high-level output, and GPIO13 as low-level output.</p> <p><code>gpio_output_set(0, 0, 0, BIT12)</code>: Set GPIO12 as input.</p>

```
void digitalWrite2(uint8_t pin, uint8_t val){
    if(val) gpio_output_set((1 << pin), 0, 0, 0);
    else gpio_output_set(0, (1 << pin), 0, 0);
}
```

```
int analogRead2(){
    return system_adc_read();
}
```

```
void delay2(int msec){
    int ms = 1000*msec;
    int endTime = system_get_time() + ms;

    while (system_get_time() < endTime){
        ESP.wdtFeed();
    }
}
```

```
int map2(int x, int min1, int max1, int min2, int max2)
{
    return (x - min1)*(max2 - min2)/(max1 - min1) + min2;
}
```

Sample code - Timer setup

```
static os_timer_t main_timer;  
static os_timer_t delay_timer;  
  
static void main_timer_handler(void *prv);  
static void delay_timer_handler(void *prv);
```

```
os_timer_setfn(&main_timer, (os_timer_func_t *)main_timer_handler, NULL);  
os_timer_arm(&main_timer, inputProcessInterval, 0);
```

```
void delay2(int msec){  
    int ms = 1000*msec;  
    int endTime = system_get_time() + ms;  
  
    while (system_get_time() < endTime){  
        ESP.wdtFeed();  
    }  
}
```

Analog multiplexor

Figure 5. Pin configuration SO16, and (T)SSOP16

Table 2. Pin description

Symbol	Pin	Description
\bar{E}	6	enable input (active LOW)
V _{EE}	7	supply voltage
GND	8	ground supply voltage
S0, S1, S2	11, 10, 9	select input
Y0, Y1, Y2, Y3, Y4, Y5, Y6, Y7	13, 14, 15, 12, 1, 5, 2, 4	independent input or output
Z	3	common output or input
V _{CC}	16	supply voltage

Christian's FPR Deliverables

My Deliverables include:

- Learning to Solder
- Finish Populating the PCB

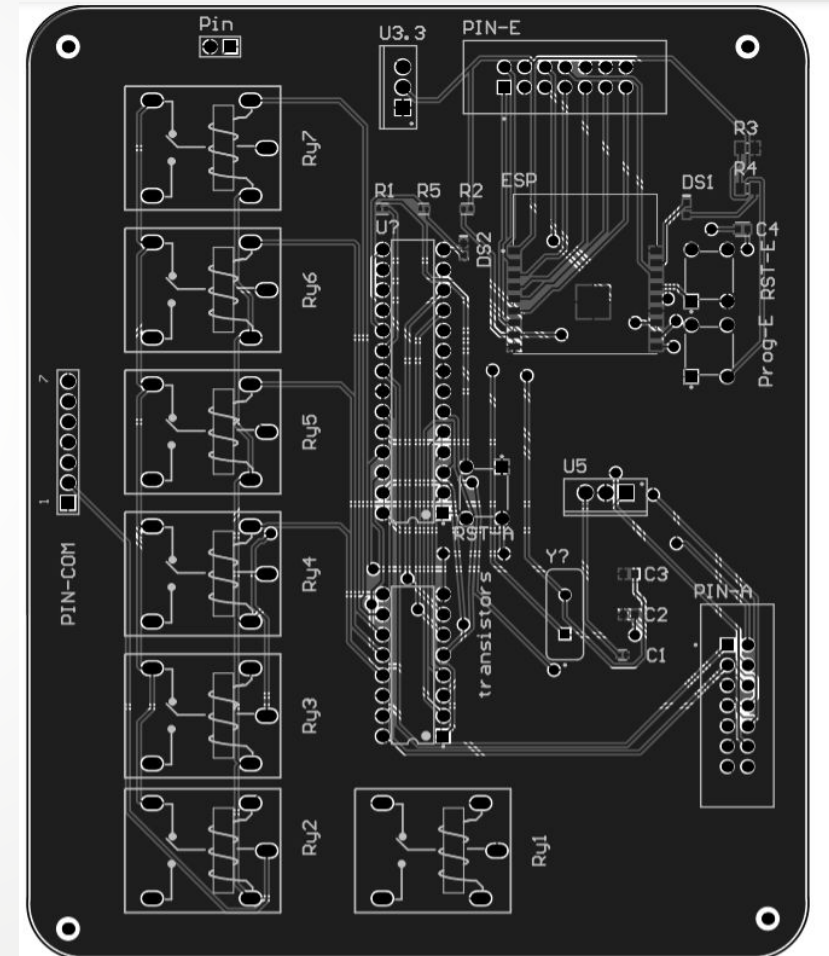

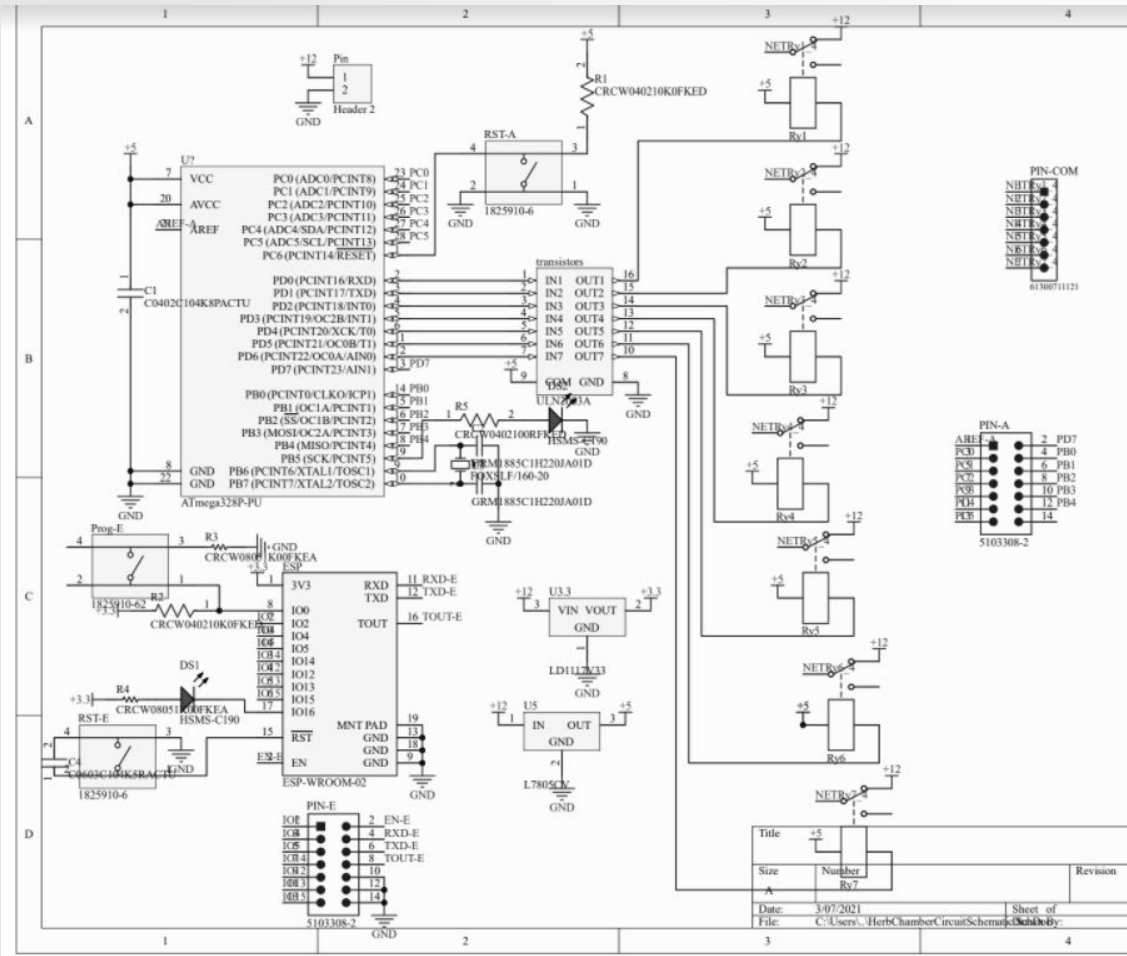

I will primarily be focusing on the PCB design, going through youtube videos to figure out the best way to solder the several parts that we needed and getting the parts that we have ordered onto the board as neatly as possible.

Christian's part with the PCB

- Some research to learn how to Solder parts onto the PCB
 - youtube clips
 - Difficult at first, got easier the more i did
- PCB design
 - most parts on board
 - issue with ESP on board
 - Didn't realize how small parts were
 - Two parts didn't arrive
- Redesign
 - Taking out the Atmega, only using ESP
 - did not have time to order new PCB

PCB Schematic and Board layout

Nam's FPR Deliverables

- Research on how to upload and run program to ESP-WROOM-02
 - To communicate with the esp, we need a usb to serial converter
 - UART Download Mode: Pull up IO2, pull down IO15 and IO0
 - Flash Boot Mode: Pull up IO2, IO0, and pull down IO15

ESP-WROOM-02

PINOUT DIAGRAM
Ver. 1 (24 Aug 2015)

ESP8266 Arduino Core
ver. 1.6.5-947-g39819f0

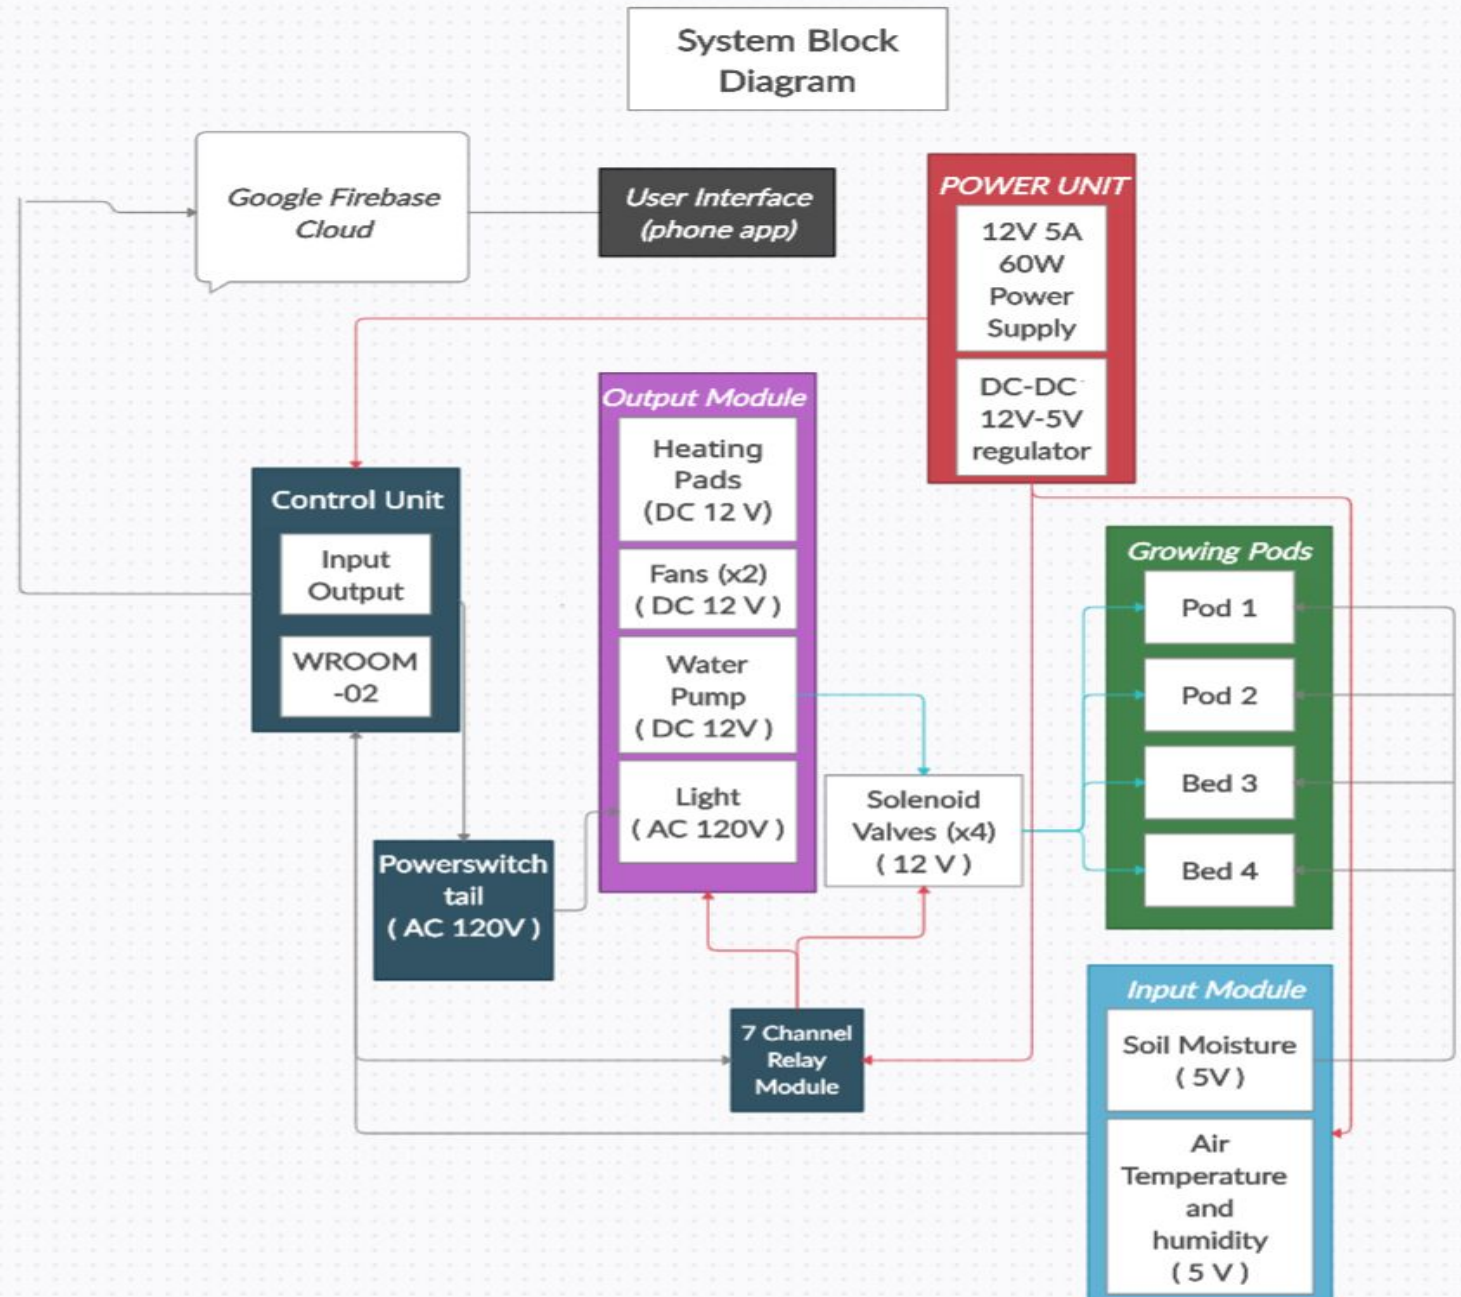

GND	UART
Power	SPI
Pin Name	I2C
GPIO	PWM
Arduino	ADC

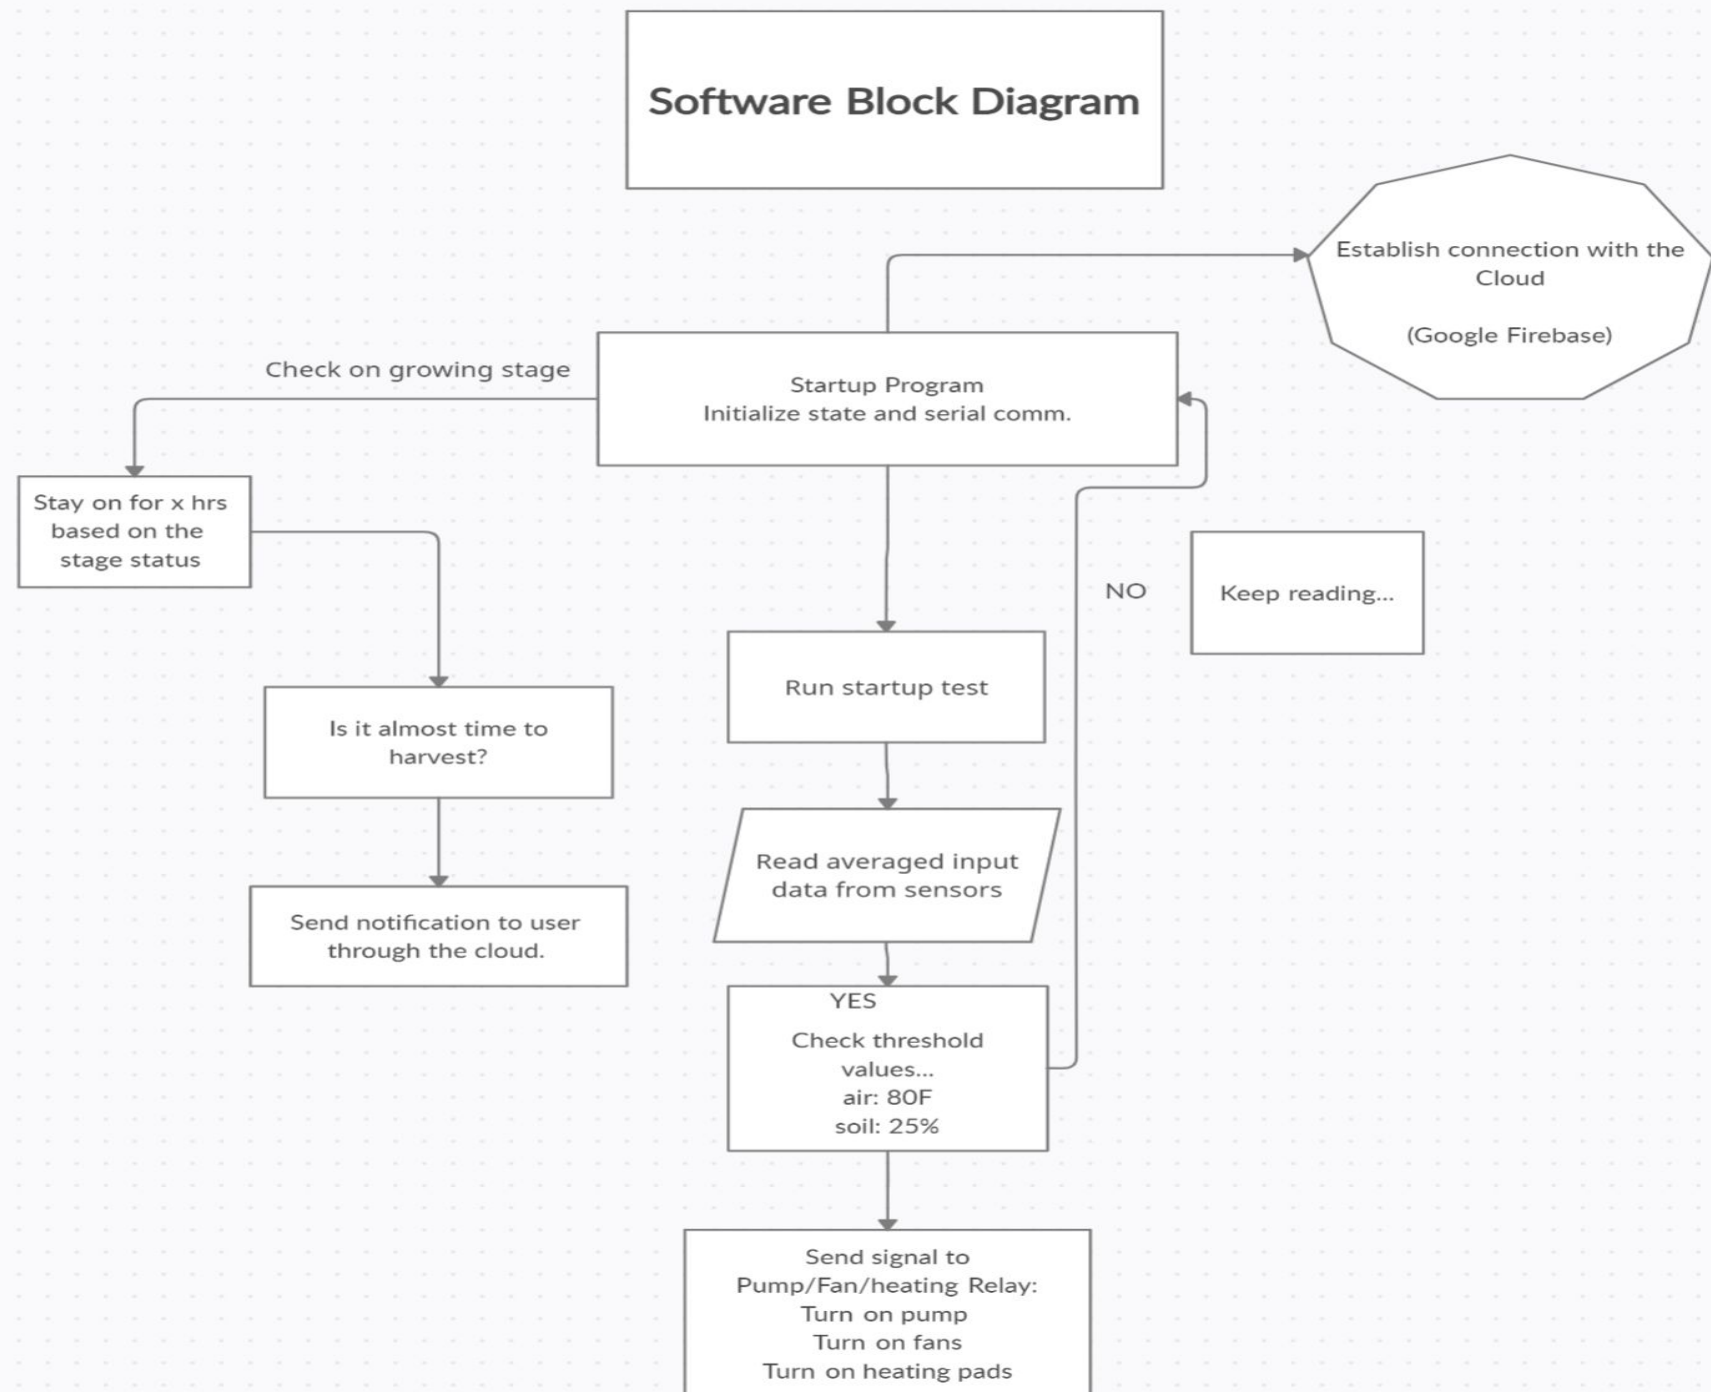

Debugging ESP-WROOM-02

- Our esp-wroom-02 does not work with our custom PCB
Solution: we have to attach it to a protoboard
- At of the moment, the vroom is still not fully configured and debugged

Demo

An aerial photograph of a large crowd of people, mostly wearing red, gathered on a green football field. The crowd is arranged in a large, irregular shape that resembles the state of Massachusetts. In the background, there are several buildings, including a prominent tall, red brick tower. The sky is blue with some clouds. The text "Question and Answer" is overlaid in white, bold, sans-serif font in the center of the image.
