PUBLICATION
NOTES

Graduate students that I have advised are listed in bold. Students that I have advised as part of extending course projects for publication are underlined. All papers are available at <http://www.ecs.umass.edu/~irwin/publications.html>. Overall, my work has received over ~3600 citations with an *h*-index of 30 on Google Scholar (see <https://scholar.google.com/citations?user=FbvaN0UAAAAJ&hl=en>).

Note that, in experimental computer systems, the top conferences are generally considered more important than the top journals. Top conferences use a rigorous review process in which multiple (3-7) program committee members evaluate each submitted paper. The top conferences also often “shepherd” accepted papers, where the program committee member supervises revisions for accepted papers according to the reviewers’ comments. In terms of acceptance rates, top conferences in computer systems typically accept <30% of submitted papers. For more details see the links below to a 1994 National Academy of Sciences report, Chapter 4 in particular, and the Computing Research Association Best Practices Memo.
