Homework grading scheme

Homework this semester is being graded according to the following procedure:

1. On each assignment a selection of problems will be formally graded, usually at 10 points per problem. Detailed comments will be given on the selected problems. The selected problems will not be announced ahead of time.

2. Other problems on the homework will be marked 0/1 based on a cursory examination of the work. Receiving a 1 does not mean you had the problem completely correct, only that you made a good effort and were at least on the right track. These 0/1 problems do not count towards the homework grade and are only there for feedback to you.

3. Detailed solutions will be posted for all problems. It is your particular responsibility to check your work against the posted solutions for problems that were not selected for formal grading.
